

# HOW TO BUY A DIGITAL CAMERA

OCTOBER 3RD 2009

SATURDAY OCTOBER 3RD | 12:00PM - 4:00PM

4 HOURS | GILLES COMTOIS

\$69.00 + GST | LEVEL: BASIC

## WORKSHOP DESCRIPTION

There is more to know about choosing a digital camera than megapixels. Image quality, sensor and viewing screen size, lens “crop” factor, ergonomics and many other aspects will determine the best camera choice. What sort of pictures do you intend to take? How much do you want to spend?

Educate yourself before making an investment and make sure you end up with the best camera for you.

This four-hour workshop will not only explain the technical differences between various camera models, single lens reflex (SLR), Zoom Lens Reflex (ZLR), compact, and point & shoot cameras, but also discusses the most important specifications to keep in mind when selecting a new digital camera.

The most common digital camera features, including white balance, histogram, exposure and metering modes will also be covered.

**This is a basic level course, which teaches fundamentals necessary for some other SPAO courses and workshops. Enrolment is limited to ensure one-on-one attention.**
