COURSE DESCRIPTION

Grow your passion for photography and learn the fundamentals of digital image capture in this eleven-week exploration of this versatile medium. Foundation in Digital Photography is designed to help you understand your camera and better control your photographs. Through lectures, demonstrations, discussions, and practical exercises you will develop your photographic eye and a passion for photography.

Topics covered in this class include: camera operation, lighting, composition, basic file management, and basic post-production. Technical and aesthetic issues pertaining to portraiture, landscape and still life photography will also be explored through lectures, discussions, practical hands-on exercises, shooting assignments and supported with handout material.

Students taking Foundation in Digital Photography must supply their own digital SLR cameras and have access to a computer outside of class. If students have a laptop, they should bring it to class. A quantity of inkjet inks and paper are included in the tuition fee for Foundation in Digital Photography. This is a basic level course, which teaches fundamentals necessary for some other SPAO courses and workshops. Enrolment is limited to ensure one-on-one attention.
